

Apex Medical: CarePilot Launch Review

Fictional source packet for the Day 1 model-behavior demonstration

Distribution note. The instructor distributes or uploads this packet only after Stage 1. Apex Medical, CarePilot, and all facts below are fictional and created for classroom use.

Internal Memorandum

To: CarePilot Launch Review Committee
From: Vice President, Clinical Products
Date: 8 July 2026
Subject: Postponement of the French CarePilot launch

Apex Medical has postponed the broad French launch of CarePilot and will continue only a limited pilot while the launch committee reviews three issues.

1. **Clinical quality.** In the latest pilot, 6.2% of generated clinical summaries contained a clinically meaningful error or omission, above the company's 3.0% launch threshold. Errors were concentrated in cases involving medication changes and multiple chronic conditions.
2. **Data-protection review.** The data-protection officer concluded that the current impact assessment does not adequately document retention periods, the human-review process, or incident-escalation procedures. A revised assessment is required before broad launch.
3. **Review economics.** Human-review cost per case is 28% above the launch target because reviewers are spending more time resolving exceptions and verifying model output than the original business case assumed.

The committee must recommend one of three options: **broad launch**, a **limited pilot**, or **continued delay**. The recommendation should address safety, compliance, economics, reversibility, and the most important missing evidence.

Operating Data

The finance team supplied the following assumptions for a representative month:

Input	Value
Monthly cases	2,400
Baseline human-review time per case	18 minutes
AI-assisted human-review time per case	7 minutes
Reviewer labor cost	\$45 per hour

Additional-review scenario. Assume that 20% of cases require a second review lasting an additional 7 minutes. Calculate both the gross monthly labor saving and the saving after this additional-review requirement.

Launch-Review Workflow

The launch review requires participation from the product lead, legal counsel, and safety officer. The intended workflow is to identify a mutually available 30-minute meeting, attach this memo, prepare a four-item agenda, and draft an invitation. No invitation or email may be sent without explicit approval from the responsible manager.
