

From Adoption to Enterprise Value

Day 2B: Workflow Redesign, Ownership, and Measurement

Case. A large company reports that 75% of professional employees use generative AI weekly. Internal surveys show substantial time savings, but operating margins, cycle times, and customer outcomes have barely moved. Leadership wants one workflow redesigned for measurable value within six months.

Team Assignments

Each team receives one workflow: customer support, procurement, sales proposals, monthly financial close, recruiting, compliance review, product research, or supply-chain exception management.

Step 1: Diagnose the Scaling Gap

Rank the three most important barriers.

- fragmented or inaccessible data;
- no clear process owner;
- individual use layered onto an unchanged workflow;
- weak integration with systems of record;
- incentives that reward activity rather than outcomes;
- legal, security, or reputational constraints;
- unreliable outputs or poor exception handling;
- no agreed method for measuring value.

Step 2: Redesign the Workflow

Stage	Human responsibility	Agent responsibility	Data, integration, or control required

2.			
3.			
4.			
5.			

Step 3: Establish Ownership and Measurement

- **Process owner:**
- **Leading operational KPI:**
- **Lagging financial KPI:**
- **Quality or risk guardrail:**
- **Six-month implementation milestone:**

Decision Brief

Prepare a three-minute recommendation to the executive committee. Explain why the company has failed to capture value, what must change organizationally, and what evidence would demonstrate that the redesign worked.
