

Design the Next Global AI Summit

Day 7A: Agenda, Membership, and Institutional Credibility

Mandate. Design the next stage of the AI summit process after Bletchley, Seoul, Paris, and New Delhi. Your institution must be politically feasible, inclusive enough to retain legitimacy, and capable of producing more than declarations.

Constraint Cards

Each team receives one additional constraint:

- U.S.-China strategic rivalry blocks intrusive inspections.
- Developing countries threaten to exit unless access and infrastructure are central.
- Frontier firms resist disclosure of model and security information.
- A serious cross-border AI incident creates pressure for an emergency mechanism.
- The host government has limited diplomatic and administrative capacity.

Institutional Budget

You have **10 points**. Select and design a package.

Institutional component	Cost	What it could do
Permanent secretariat	4	continuity, agenda preparation, implementation tracking
Independent scientific panel	3	shared risk assessments and technical reports
Incident reporting and verification body	5	confidential reporting, investigation, compliance review
AI development and infrastructure fund	4	compute access, capacity building, public-interest projects
Annual ministerial summit	2	political attention and formal commitments
Technical standards working groups	2	evaluations, interoperability, and common terminology
Emergency consultation mechanism	3	rapid coordination after severe incidents
Participation support for lower-income states	2	travel, expertise, and negotiating capacity

Charter Requirements

Your design must specify:

1. scope: frontier safety, diffusion and development, infrastructure, labor, standards, or a defined combination;
2. membership and participant selection;

3. host and secretariat arrangement;
4. decision rule and treatment of non-signatories;
5. monitoring, reporting, or verification;
6. how firms participate without controlling the process;
7. how the agenda survives changes in host governments.

Scenario Scrutiny

Before presenting, answer:

- Who moves first?
- Why do strategic rivals comply?
- How is cheating or nonperformance detected?
- What happens when compliance becomes costly?
- Does the institution concentrate power in states, firms, or technical experts?

Four-Minute Pitch

Present a one-page charter and defend why your package is more feasible and consequential than the alternatives. The class will allocate a limited number of votes among the designs.
